Minor	02

This table lists the number of defects in the based on their type.

<i>Defect Status</i>	<i>Build Result</i>
Total number	04
Functional	04
UI/UX	00
Performance	00

Feedback-

- Most address book functionality works as per the requirement but some defects are found in the manual functional testing.
- In the address book functionality, the first name, last name, and in city fields take numbers and special characters as input. So as per the requirement In all of the mentioned fields, the user should be able to enter characters only.
- If the user wants to delete all saved addresses then open the delete all the saved addresses.
- If the user wants to change the default address status from yes to no without adding a new address then open that functionality to change the default address status as per the testing, the status does not change but after clicking on the continue button user gets the following message- "Your address has been successfully updated"
